## Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purpose. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the product have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (  $\triangle$  ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)  
After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5 mA AC (r.m.s.).

- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500  $\Omega$  10 W resistor paralleled by a 0.15  $\mu$ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

## Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

# Specifications

## AX-311BK

### OVERALL CHARACTERISTICS

#### Output power:

80 watts per channel into 4 ohms at 1 kHz (DIN).

60 watts per channel into 8 ohms at 1 kHz (DIN).

55 watts per channel, min. RMS, both channels driven, into 8 ohms from 20 Hz to 20 kHz, with no more than 0.007% total harmonic distortion.

55 watts per channel, min. RMS, both channels driven, into 8 ohms at 1 kHz with no more than 0.003% total harmonic distortion. (measured by JVC Audio Analyzer System)

Total harmonic distortion	: 0.007% (20 Hz — 20 kHz, 8 ohms) at 55 watts
Intermodulation distortion	: 0.007% (60 Hz : 7 kHz = 4 : 1, 8 ohms) at 55 watts
Power band width	: 5 Hz — 50 kHz (IHF, 0.05%, 8 ohms both channels driven)
Frequency response	: 5 Hz — 80 kHz +0, -3 dB (8 ohms)
Damping factor	: 90 (1 kHz, 8 ohms)
Input terminals	
Input sensitivity/impedance (1 kHz)	
PHONO	: 2.5 mV/47 kohms
CD/AUX/	: 200 mV/43 kohms
TUNER/TAPE 1, 2	
Signal-to-noise ratio	
PHONO	: 74 dB ('66 IHF)
CD/AUX/	: 104 dB ('66 IHF)
TUNER/TAPE 1, 2	
PHONO	: 80 dB ('78 IHF)
(REC OUT)	
CD/AUX/	: 76 dB ('78 IHF)
TUNER/TAPE 1, 2	
(SP OUT)	
PHONO	: 67 dB (DIN)
CD/AUX/	: 68 dB (DIN)
TUNER/TAPE 1, 2	
Tone controls	: TREBLE: +8 ± 1 dB -8 ± 1 dB (at 10 kHz) BASS: +8 ± 1 dB -8 ± 1 dB (at 100 Hz)
SUPER BASS	: +6 dB (at 50 Hz)
(Volume control at -30 dB position)	

### EQUALIZER

#### PHONO overload

capacity 95 mV (0.02% THD)

#### PHONO RIAA

deviation ± 0.5 dB (20 Hz — 20 kHz)

#### Recording output

##### Output level/

##### impedance

TAPE REC-1, 2 : 200 mV/Maximum  
2 kohms

### GENERAL

#### Dimensions

: 435 (W) x 127 (H)  
x 310 (D) mm  
(17-3/16" x 4-15/16"  
x 12-1/16")

#### Weight

: 7.2 kg (15.9 lbs.)

Design and specifications subject to change without notice.

### POWER SPECIFICATIONS

Areas	Line voltage & frequency	Power consumption	
		AX-311BK	AX-411BK
Continental Europe	AC 220 V~, 50 Hz	220 watts	240 watts
U.K.	AC 240 V~, 50 Hz	510 watts	590 watts
Australia			
Other areas	AC 110/120/220/240 V~ selectable, 50/60 Hz	220 watts	240 watts

Provided on units for Continental Europe, the United Kingdom and Australia.  
Vorhanden an Geräten für Kontinentaleuropa, Großbritannien und Australien.  
Fourni sur les appareils pour l'Europe Continentale, le Royaume-Uni et l'Australie.  
Aanwezig op apparaten voor het Europese Vasteland, Groot-Brittannië en Australië.  
Se provee en las unidades para Europa Continental, el Reino Unido y Australia.  
För kontinental Europa, Storbritannien och Australien.

## FRONT PANEL

**1 POWER and indicator**

Press this button to turn the power on. To turn the power off, press it again. The indicator lights when the POWER button is pressed to on.

**Notes:**

- When power is not supplied to this amplifier for 2 — 3 days, the source select button pressed before the power was switched off may be lost when the power is switched on again. If this happens, set the buttons, etc. again.
- An electronic source selector is used in this unit. When the POWER button is first switched on, two or more sources or no source may be selected. Make sure to input the source select data by pressing one of the source selectors.
- If the POWER button is pressed repeatedly to switch on and off too quickly, the same phenomenon as the above will occur.

**2 BASS**

Turn clockwise to boost bass response and counterclockwise to decrease it.

**3 TREBLE**

Turn clockwise to boost treble response and counterclockwise to decrease it.

**4 BALANCE**

Balances the volume between the left and right speakers. Usually set it to the center click position.

**5 CD DIRECT and indicator**

Press this button to enjoy listening to the CD with good sound quality. The indicator lights and the signal fed from the CD terminals is directly connected to the volume, bypassing the circuits on the way, thus allowing you to enjoy listening to an improved sound quality.

**Note:**

- While the CD DIRECT button is pressed, the reproduced sound does not change even if the source selector (including TAPE 2 MONITOR) and BALANCE volume are operated, press the CD DIRECT button again to turn the indicator off when using these.

**6 SUPER BASS**

When sound volume is turned down, the human ear tends to become less aware of bass sound. At low sound levels the SUPER BASS knob can be used to emphasize the bass sound. For ordinary use, the knob should be set to the normal position.

**7 MASTER VOLUME**

Controls the volume of the speakers and headphones.

**8 PHONES (Headphones jack)**

Plug stereo headphones into this jack for private listening. If you want to listen to sound from the headphone only, press the SPEAKERS buttons to "OFF".

**9 SPEAKERS**

Press to switch the speakers connected to the SPEAKERS 1 or 2 terminals on ( — ) and off ( ■ ).

**10 CARTRIDGE (AX-411BK only)**

**MC ( — ):** Press in when using an MC cartridge having an output of less than 0.5 mV.  
**MM ( ■ ):** Press again when using an MM or MC cartridge having an output of more than 0.5 mV.

**11 TAPE 2 MONITOR**

**ON ( — ):** Set to this position to listen to the tape deck connected to the TAPE 2 terminals of this unit. If your tape deck is of the 3-head type, you can monitor the recorded sound while recording by setting this button to ON.  
**OFF ( ■ ):** Keep this button set to this position, except when you want to listen to the tape deck connected to the TAPE 2 terminals of this unit.

**12 Source selector****TAPE 1 MONITOR**

Press to listen to a tape deck connected to the TAPE 1 terminals.

**CD**

Press to listen to the source connected to the CD terminals.

**TUNER**

Press to listen to radio broadcasts by a tuner connected to the TUNER terminals.

**AUX**

Press to listen to the source connected to the AUX terminals.

**PHONO**

Press to listen to records played by a turntable connected to the PHONO terminals.

**13 Source indicator**

The indicator corresponding to the source select button pressed lights.

## Removal Procedures

### ■ Removing the Top Cover

1. Remove six screws.
2. Remove the top cover by lifting up its rear section and pulling it backward while holding it on incline.

### ■ Removing the Front Panel

1. Remove the top cover.
2. Pull out the volume knob.
3. Remove three plastic rivets on the upper part of the front panel and three screws from the lower part.

### ■ Removing the Bottom Cover

1. Remove 17 screws fixing the bottom cover.

**Note :** When installing the bottom cover, properly insert the protect cover between the power transformer and the power primary PC board as shown in the figure at right.

### ■ Removing the Power Transistors

1. Remove the top cover.
2. Remove the bottom cover.
3. Remove the retaining screw from the defective power transistor and replace it.

## Adjustment Procedures

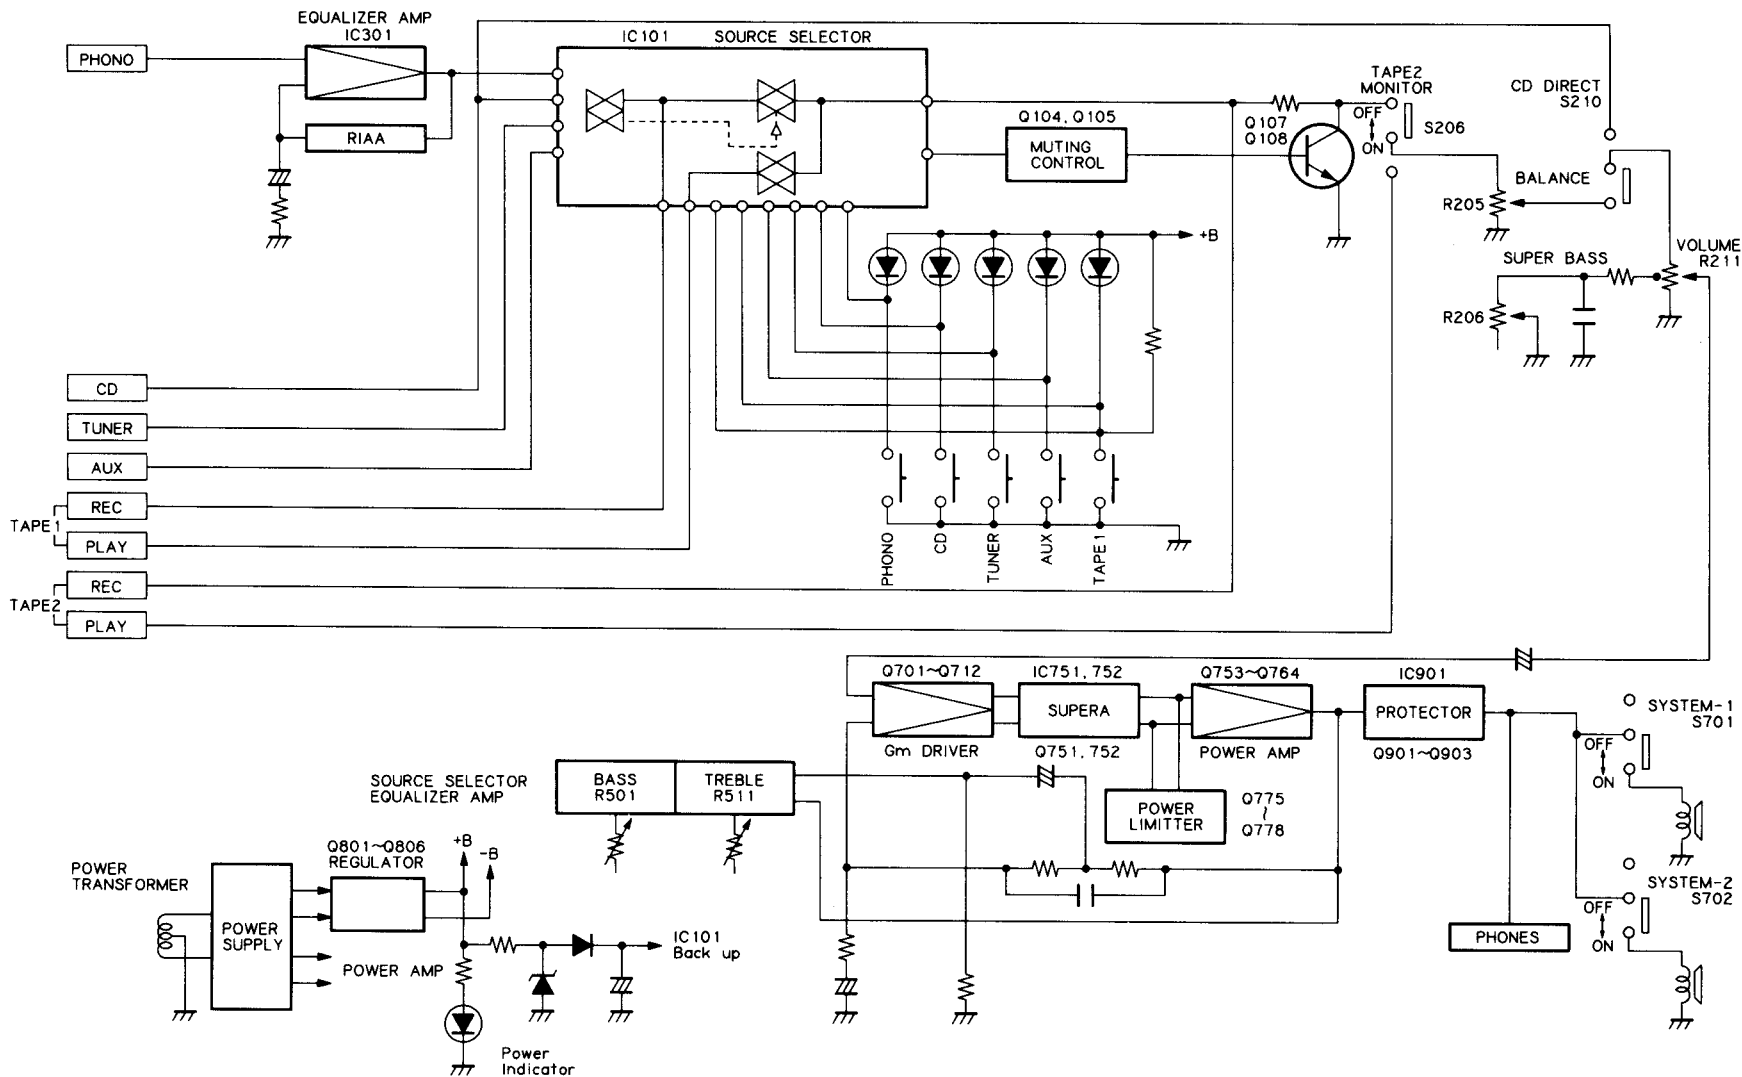

### ■ Power Amplifier Idling Adjustment

- Before turning on the power, turn the the semi-fixed resistors (R751 for L channel and R752 for R channel) of the power amplifier circuit board fully counterclockwise.
- Adjust the semi-fiexed resistor (R751 and R752) so that the voltage at the following test points of the power amplifier circuit board is within a range of 3 ~ 5 mV after the power is turned on.
  - L channel: Measure the voltage between test point (A) (emitter of Q761) and output at the test point (B).
  - R channel: Meaure the voltage between test point (C) (emitter of Q762) and output at the test point (D).
- Readjust resistors R751 and R752 about 10 minutes after the power is turned on (the heatsink temperature must be sufficiently high) so that the voltage at the test points becomes 11 mV.  
Confirm that the voltage does not vary when the heat-sink temperature increases further.

**Note:** Be sure to perform the measurement with the probes and cabinet of the measuring equipment separated from the grounding terminals of AX-311BK or other measuring equipment.
